5. tolerate 용인하다, 견디다

6. exposure 노출

7. tolerance 용인, 참을성

2. Read and Think (p.59)

p.59에서 Personal Experiences 문단만 시험범위에 포함됨.

To appreciate flavors {such as chocolate, vanilla, blue cheese, and
such as + 예시
cilantro}, we need not just our tongues, but more importantly our
noses. As we chew food, its smells make their way to the back of our
~할 때
noses from inside our mouths, enabling us to distinguish between

many flavors. Some scientists discovered / that [individuals with a
주어
certain gene] are more sensitive to the smell of cilantro. These people
are likely to say it has a soapy flavor. 여기까지 시험범위 포함 안됨

Q. 오랫동안 싫어했던 음식을 좋아하도록 학습할 수 있는지에 대한 질문에 Julie Mennella는 무엇이라 답하는지 쓰시오.

A. ★★★ 좋아하도록 학습할 수 있다. [문장]

Personal Experiences

Can we learn to like a food we've long disliked? "Your biology is not your destiny. When you're open to different foods, you learn to like [what you eat]," answers Julie Mennella, a researcher from the Monell Chemical Senses Center.

목적격 관계대명사 that 생략

Q. 다음 글에 따르면, 새로운 음식을 좋아하도록 학습하는 데 적응력이 더 높은 사람들은 누구인지 우리말로 쓰시오.

★★★ 아이들이 더 적응력이 높다.
[주어 동사 있는 문장으로]

She says that kids are particularly adaptable when it comes to learning to like new foods. Research has shown that after tasting a food eight or ten times, children will become more accepting of it. Similarly, even people (who hate cilantro) may be able to learn to tolerate it or even like it. Over time and through exposure, they can build up tolerance to cilantro, by adding a small amount in a curry, for example.
